

## Project Design Phase

### Problem – Solution Fit Template

| Field         | Details                                  |
|---------------|------------------------------------------|
| Date          | 18 June 2026                             |
| Team ID       | 24EG105H22                               |
| Project Name  | HouseHunt – House Rent Management System |
| Maximum Marks | 2 Marks                                  |

### Problem – Solution Fit Canvas

| Aspect                  | Details                                                                                                                                                                             |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Target Customer         | Tenants/House Seekers and Property Owners in urban areas                                                                                                                            |
| Customer Problem        | No centralized platform to search, list, or manage rental properties; dependence on brokers; fake listings; no booking management                                                   |
| Existing Alternatives   | OLX, MagicBricks, local brokers, Facebook groups – but no role-based management, admin approval, or booking workflow                                                                |
| Proposed Solution       | HouseHunt – a full-stack web app with Owner/Renter/Admin roles, admin-approved listings, booking request workflow, and JWT-secured accounts                                         |
| Key Differentiators     | Admin approval before listings go live; direct owner-renter communication; structured booking status tracking; no broker fees; role-specific dashboards                             |
| Customer Job to Be Done | Find a verified rental property quickly, or list a property and manage tenant inquiries in one place                                                                                |
| Pain Relievers          | Verified listings (admin approval), centralized search with filters, direct booking requests, real-time status updates                                                              |
| Gain Creators           | Broker-free platform, transparent pricing, role-based dashboards, easy property comparison, secure JWT authentication                                                               |
| Solution Fit Validation | The platform directly addresses both tenant pain points (scattered info, fake listings) and owner pain points (limited reach, manual management) through a unified digital solution |

### Problem-Solution Fit Summary

| Problem                                             | HouseHunt Solution                                               | Fit Evidence                                     |
|-----------------------------------------------------|------------------------------------------------------------------|--------------------------------------------------|
| Tenants cannot find verified rental listings easily | Admin-approved property listings visible only after verification | Eliminates fake listings; builds trust           |
| No centralized search for rental properties         | Search & filter by location, price, type, bedrooms               | One platform replaces brokers, social media, ads |
| Property owners lack structured booking management  | Owner dashboard with accept/reject booking workflow              | Owners manage all requests in one place          |
| No oversight over property authenticity             | Admin panel with approve/reject workflow                         | Platform integrity maintained by admin role      |
| Tenants cannot track their rental applications      | Renter dashboard with real-time booking status                   | Transparent process increases trust              |
